Refrigerator Service

- A refrigerator (fridge,) is a popular household appliance which is seen most probably in everyone home. It is also necessary to follow the regular maintenance in to keep the fridge as efficient as possible. Unfortunately, most refrigerators don't last forever due to lacking of regular maintenance and some refrigerator lasts 10-13 years maximum.
- Servicing your refrigerator every Six months can help to prevent the need for Refrigerator repairs overall.
- Without regular maintenance, the refrigerator loses about 15% of its original efficiency for

Refrigerator Maintenance and Servicing

In order to improve the Efficiency of any household appliances, the regular maintenance should be followed.

- **Clean the condenser coils yearly Twice**

Condenser coils play a vital role as removing heat from refrigerators and freezers. So generally the coils are large, and so the radiator-like coils located beneath the unit. The situation really becomes worse for the refrigerator to remove heat in the case when dust particles and dirt cling to the coils. The result is increased energy consumption. So regular cleaning should be processed in order to avoid major issues and also service cost.

- **Cleaning the interior part**

Either weekly or Fortnight, make a habit of cleaning the interior part of the fridge. By using a soft cloth

Refrigerator Maintenance and Servicing

- **Set the Perfect temperature**

So, there is the certain limit to maintain the fridge temperature under control. So maintaining your refrigerator at a temperature between 35-40 degrees Fahrenheit will be useful as the internal environment always remain to stay consistent, to preserve Quality food. Don't forget to set the Freezer temperature, always set the freezer to the consistent temperature of 0 degrees Fahrenheit.

- **Make sure the Doors Closed**

Don't let the doors open after usage of the fridge because no matter what type of fridge are you using, if the door remains open for a long time
